AIM: Write a program for validation of arithmetic statements.

Example program:

```
#include<stdio.h>
#include<string.h>
int main()
{
    int i,j,l,t=0;
    char input[20];
    printf("18012011033\n");
    printf("Enter the input\n");
    scanf("%s",&input);
    l=strlen(input);
    for(i=0;i<l;i++)
    {
        if(input[i]=='('){
            t++;}
        else if(input[i]==')'){
            t--;}
        else if(input[i]=='*'||input[i] == '/'|| input[i]=='+' || input[i] == '-')
        {
            if(input[i-1]>96 && input[i-1]<123 && input[i+1]>96 && input[i+1]<123)
            {
            }
            else{
                break;
            }
        }
    }
    if(i==1 && t==0){
        printf("Valid");}
    else{
        printf("Invalid ");}
```

```
}  
}
```

Output:

```
$main  
18012011033  
Enter the input  
a=b*c  
Valid
```
